CO2 and CO4 Evaluation Finished Project Report Fall 2022-2023

Project Title: Dream Heaven

Section: G

Group: 04

Student Name	Student Id
Rabbi Hasan Himel	20-42204-1
Mohi Uddin Anando	20-43585-1
Md. Mostafizur Rahman	20-43584-1

Dream Heaven

Project Description:

A wedding can be stressful since there are many tasks to complete. Occasionally, it was difficult to control everything at a wedding function. We provide a web-based wedding administration system as a solution to this issue. A wedding guest can visit our website and select a wedding event management package at that time. People are too occupied socializing during weddings to adequately do their task. We will provide them with assistance from a photographer, videographer, and cinematographer, so they will not have to go through any extra trouble to capture their perfect moment. Our wedding management staff will take over at that point. in order to avoid any inconvenience from a wedding celebration for the bridal couple and their families.

There were 3 types of users in our project. There were Admin, Moderator, Customer.

ADMIN:

The major authority was Admin. Admin needed to sign up first. Next, log in. The admin used a dashboard. Admin has access to view profiles, modify passwords, and alter names. The administrator had to add the item, edit the item's details, and remove the item. Admin is also aware of each user's access information. Using ajax, admin has the option to search for employees and products info.

MODERATOR:

The moderator had to handle the goods. Manager first needed to sign up. Next, log in. a dashboard for the moderator. Moderators have the ability to see profiles, modify passwords, alter names, and post profile pictures. The administrator has to add the goods, edit their information, and remove them. Products might be searched for and edited by the moderator. However, the Moderator cannot view the list of users or employees.

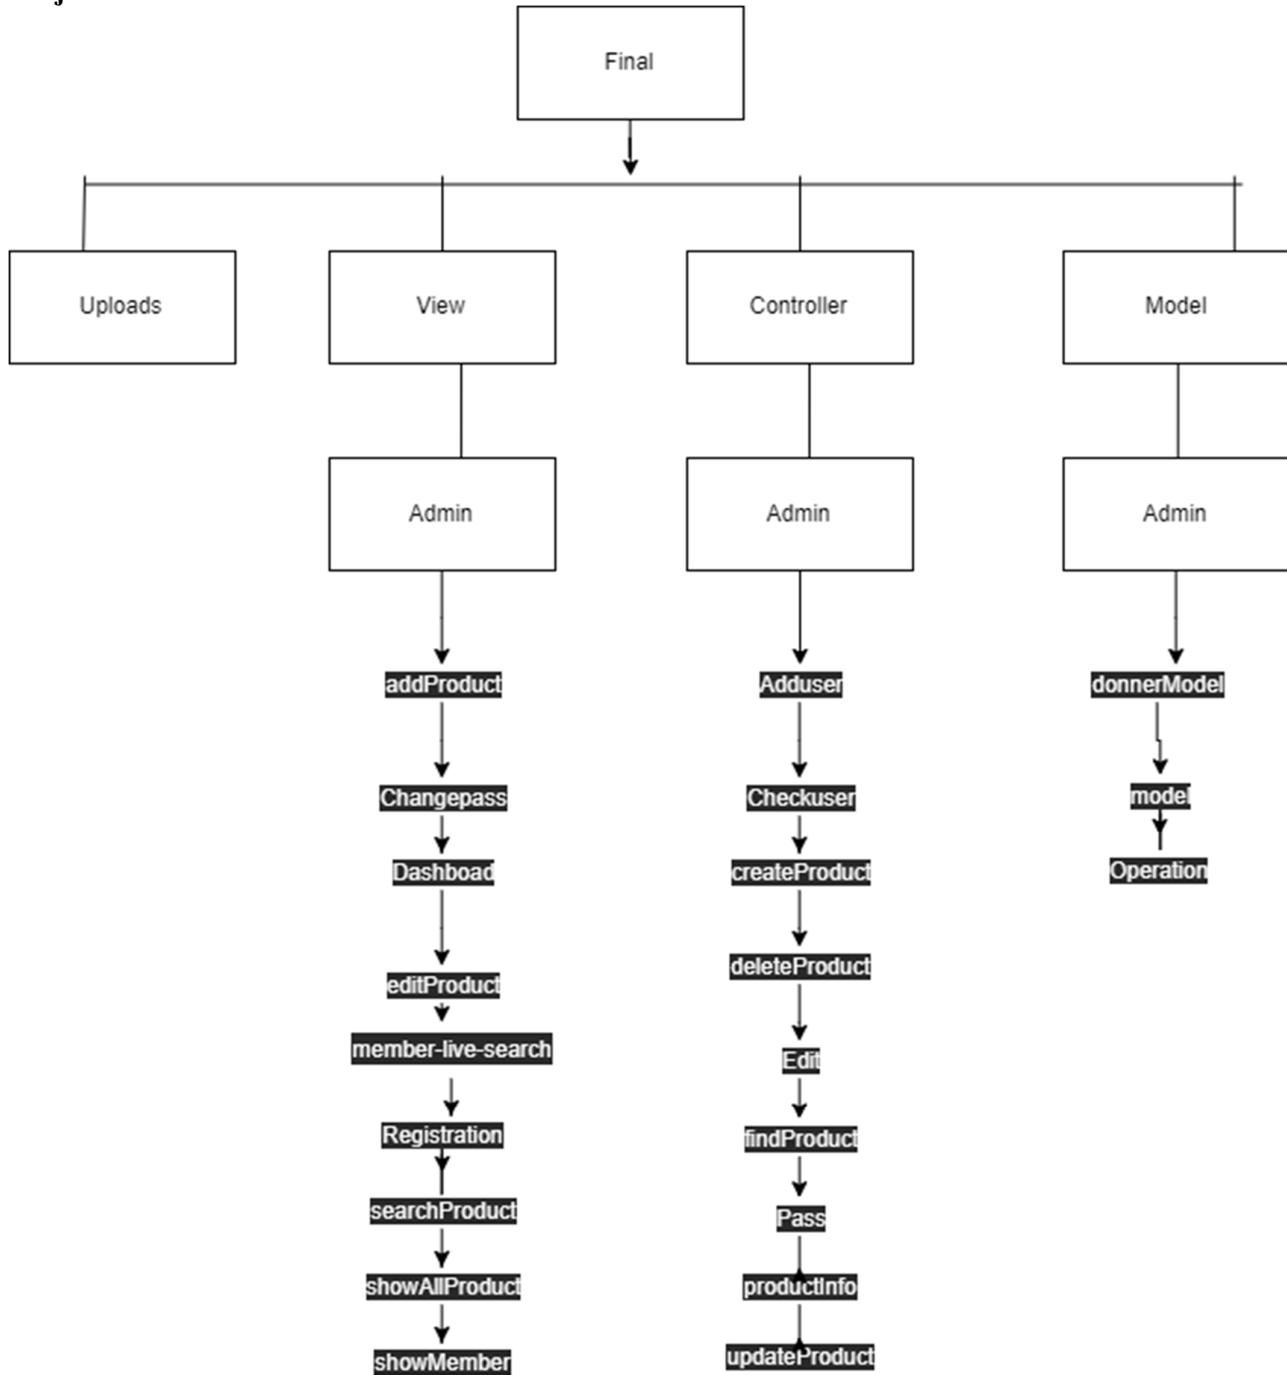

CUSTOMER:

A customer purchases goods. First, the customer has to register. Next, log in. The client has a dashboard. Customer has the option to see profile, update name, and add profile photo. The number of things the customer wished to purchase had to be added. Customers can browse merchandise as well. Customers will have the option of using live search to look for products directly in the database.
